DETAILED ACTION

1. Claims 1, 2, and 22-35 are pending.

EXAMINER'S AMENDMENT

2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Julie McConihay on Wednesday August 25, 2004.

3. The application has been amended as follows:

The claims:

In claim 1, lines 7 and 10, insert –wherein said amino acid sequence comprising a cellulose binding domain binds the cellulase to a cellulosic substrate—after the word “cellulose binding domain”.

Response to Amendment

4. The rejection of claims 1, 2 and 22-35 rejected under 35 U.S.C. 103(a) as being unpatentable over Fowler et al. (US 6,268,196) in view of Schulein et al. (US 6,117,664) is withdrawn in light of applicant's arguments filed April 19, 2004 and in view of the Examiner's Amendment above.

Reasons For Allowance

5. The following is an examiner's statement of reasons for allowance: Claims 1, 2, 22-35, renumbered 1-16, are allowable upon consideration of applicant's arguments and the examiner's amendment above.

6. The prior art most pertinent to the instant claims is Fowler et al. (US 6,268,196).

Fowler et al. teach the utility of cellulases derived from *Humicola insolens* or *Trichoderma longibrachiatum* (previously classified as *Trichoderma reesei*) in the treatment of cellulose containing fabrics via a linker region to a cellulose binding domain subunit. However, Fowler et al. teach detergent compositions comprising a truncated cellulase binding domain not possessing the significant hydrolytic activity for cellulase binding activity. Fowler et al. do not teach or suggest the claimed modified enzyme comprising a cellulose binding domain having cellulose binding activity to bind the cellulase to a cellulosic substrate. And it would not have been obvious to one of ordinary skill in the art to link a cellulolytic enzyme EGI to an amino acid sequence comprising a cellulose binding domain having cellulose binding activity because the prior art teaches linking the cellulolytic enzyme EGI to a cellulose binding domain that does not possess the catalytic activity for cellulose binding activity.

None of the prior art of record do not teach or suggest a modified cellulolytic EGI enzyme derived from *Humicola insolens* or *Trichoderma reesei* having the properties as recited by the instant claims linked to a cellulose binding domain having cellulose binding activity as recited by the instant claims.

7. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
